

Hebden Bridge Flood Alleviation Scheme (FAS) - The Consultation

The displays outline the progress we have made in the flood alleviation scheme. To begin with we describe the work that has been done to date on the identification of options and associated modelling in the following posters:

1. River flooding
2. Surface water flooding
3. Canal flooding
4. Using the Yorkshire Water reservoirs upstream on Hebden Water to reduce flood risk

We then go on to outline our current proposals for what we hope to achieve in the town and wider catchment:

5. Natural Flood Management
6. Outline proposals for the FAS

We recognise the importance of the local environment, particularly regarding the aesthetic appeal and the heritage assets of Hebden Bridge. With this in mind we outline how we are considering these key elements

7. Environmental constraints
8. Landscaping and Appearance

Lastly we explain what we plan to do next

9. Future Programme

As you look at the posters, feel free to ask us any questions.

There are also questions around the room for you to think about and add your comments to help us shape the scheme design.
